**Chinkstar Dec 14 2020** Everything was about to change. In less than forty-eight hours guy'd be taking the stage in Vancouver, owning an audience meant for some all-hype-no-talent young-money rapper, spitting next-level truths that'd have A&Rs scrapping for him coast to coast. He'd ink some paper and

drop an album on the world it didn't even know it had been waiting for. All with game and swag to spare. This was the edge, the almost there, and we knew it. Chinksta rap is all the rage in small-town Alberta. And the king of Chinksta is King Kwong, high-schooler Run's older brother. Run isn't a fan of Kwong's music—or personality, really. But when Kwong goes missing the night before his crowning performance and his mom gets wounded in crossfire, Run finds himself, with his sidekick, Ali, in the middle of a violent battle between rival Chinese rap gangs, on the run from his crush's behemoth brother, and rethinking his feelings about his family and their history, his hatred of "rice-rap," and what it means to be Asian. With imaginAsian and a flair for the rap lyric, Jon Chan Simpson mashes up the (graphicless) graphic novel and the second-generation-immigrant narrative to forge a bold new vision of what the novel can be. Jonathan Chan Simpson grew up in Red Deer, Alberta, and lives in Toronto, Ontario. He is a graduate of the University of Toronto's MA creative writing program, and his work has been featured in Ricepaper magazine.

On Trails Oct 31 2019 "In 2009, while thru-hiking the Appalachian Trail, Robert Moor began to wonder about the paths that lie beneath our feet: How do they form? Why do some improve over time while others fade? What makes us follow or strike off on our own? Over the course of the next seven years, Moor traveled the globe, exploring trails of all kinds, from the miniscule to the massive. He learned the tricks of master trail-builders, hunted down long-lost Cherokee trails, and traced the origins of our road networks and the Internet. In each chapter, Moor interweaves his adventures with findings from science, history, philosophy, and nature writing--combining the nomadic joys of Peter Matthiessen with the eclectic wisdom of Lewis Hyde's *The Gift*. Throughout, Moor reveals how this single topic--the oft-overlooked trail--sheds new light on a wealth of age-old questions: How does order emerge out of chaos? How did animals first crawl forth from the seas and spread across continents? How has humanity's relationship with nature and technology shaped the world around us? And, ultimately, how does each of us pick a path through life? With a breathtaking arc that spans from the dawn of animal life to the digital era, *On Trails* is a book that makes us see our world, our history, our species, and our ways of life anew"--Book jacket flap.

Globes Mar 17 2021 The concept of the earth as a sphere has been around for centuries, emerging around the time of Pythagoras in the sixth century BC, and eventually becoming dominant as other thinkers of the ancient world, including Plato and Aristotle, accepted the idea. The first record of an actual globe being made is found in verse, written by the poet Aratus of Soli, who describes a celestial sphere of the stars by Greek astronomer Eudoxus of Cnidus (ca. 408-355 BC). The oldest surviving globe--a celestial globe held up by Atlas's shoulders--dates back to 150 AD, but in the West, globes were not made again for about a thousand years. It was not until the fifteenth century that terrestrial globes gained importance, culminating when German geographer Martin Behaim created what is thought to be the oldest surviving terrestrial globe. In *Globes: 400 Years of Exploration, Navigation, and Power*, Sylvia Sumira, beginning with Behaim's globe, offers a authoritative and striking illustrated history of the subsequent four hundred years of globe making. Showcasing the impressive collection of globes held by the British Library, Sumira traces the inception and progression of globes during the period in which they were most widely used--from the late fifteenth century to the late nineteenth century--shedding light on their purpose, function, influence, and manufacture, as well as the cartographers, printers, and instrument makers who created them. She takes readers on a chronological journey around the world to examine a wide variety of globes, from those of the Renaissance that demonstrated a renewed interest in classical thinkers; to those of James Wilson, the first

successful commercial globe maker in America; to those mass-produced in Boston and New York beginning in the 1800s. Along the way, Sumira not only details the historical significance of each globe, but also pays special attention to their materials and methods of manufacture and how these evolved over the centuries. A stunning and accessible guide to one of the great tools of human exploration, *Globes* will appeal to historians, collectors, and anyone who has ever examined this classroom accessory and wondered when, why, and how they came to be made.

*Atheism and Agnosticism: Exploring the Issues* Jun 07 2020 This is the age of atheism and agnosticism. The number of people living without religious belief and practice is quickly and dramatically rising. Some experts call nonreligion, after Christianity and Islam, the third largest "religion" in the world today. Understanding the origins, history, variations, and impact of atheism and agnosticism is crucial to getting a grasp of the meaning of the present and gaining a glimpse of the future. Exploring some of the most extraordinary people, events, and ideas of all time, this book provides a fair, comprehensive, and engaging survey of all aspects of contemporary atheism and agnosticism. An overview essay discusses the background and social and political contexts of unbelief, while a timeline highlights key events. Some 50 alphabetically arranged reference entries follow, with each providing fundamental, objective information about particular topics along with cross-references and suggestions for further reading. The volume closes with an annotated bibliography of the most important resources on atheism and agnosticism.

*The Atlas of Atlases Sep 03 2022* A lavishly illustrated look at the most important atlases in history and the cartographers who made them.

*Pathways to Exploration May 07 2020* The United States has publicly funded its human spaceflight program on a continuous basis for more than a half-century, through three wars and a half-dozen recessions, from the early Mercury and Gemini suborbital and Earth orbital missions, to the lunar landings, and thence to the first reusable winged crewed spaceplane that the United States operated for three decades. Today the United States is the major partner in a massive orbital facility - the International Space Station - that is becoming the focal point for the first tentative steps in commercial cargo and crewed orbital space flights. And yet, the long-term future of human spaceflight beyond this project is unclear. Pronouncements by multiple presidents of bold new ventures by Americans to the Moon, to Mars, and to an asteroid in its native orbit, have not been matched by the same commitment that accompanied President Kennedy's now fabled 1961 speech - namely, the substantial increase in NASA funding needed to make it happen. Are we still committed to advancing human spaceflight? What should a long-term goal be, and what does the United States need to do to achieve it? *Pathways to Exploration* explores the case for advancing this endeavor, drawing on the history of rationales for human spaceflight, examining the attitudes of stakeholders and the public, and carefully assessing the technical and fiscal realities. This report recommends maintaining the long-term focus on Mars as the horizon goal for human space exploration. With this goal in mind, the report considers funding levels necessary to maintain a robust tempo of execution, current research and exploration projects and the time/resources needed to continue them, and international cooperation that could contribute to the achievement of spaceflight to Mars. According to *Pathways to Exploration*, a successful U.S. program would require sustained national commitment and a budget that increases by more than the rate of inflation. In reviving a U.S. human exploration program capable of answering the enduring questions about humanity's destiny beyond our tiny blue planet, the nation will need to grapple with the attitudinal and fiscal realities of the nation today while staying true to a small but crucial set of fundamental principles for the conduct of exploration of the endless frontier. The recommendations of *Pathways to Exploration* provide a clear map toward a human spaceflight program that inspires students and citizens by furthering human exploration and discovery, while taking into account the long-term commitment necessary to achieve this goal.

Great Heart Jan 03 2020 In July 1903 Leonidas Hubbard set out to explore the uncharted interior of Labrador by canoe, accompanied by Dillon Wallace, his best friend, and George Elson, a Métis guide. Bad luck and bad judgment led the expedition into disaster and the party was forced to turn back. Hubbard died of starvation just thirty miles from camp. Two years later Wallace decided to complete the overland expedition and clear himself of blame for Hubbard's death. He had, however, a rival - Mina Hubbard. She blamed Wallace for her husband's death and, with Elson as her guide, intended to complete the trek first. The result was an epic race between the avenging widow and her husband's best friend. Reconstructing the story from the long-lost journals and diaries of the 1903 and 1905 expeditions, James Davidson and John Ruge trace the explorers' routes and re-create the saga. Great Heart is a gripping drama of individuals pushed to the limits of human endurance.

Exploring the History of Childhood and Play through 50 Historic Treasures Aug 02 2022 A full-color trip through the treasures of American Childhood from 1650 to today. Remember the toys you played with when you were growing up? Each of those objects has a story to tell about the history of American childhood and play. Construction toys like Lincoln Logs and Erector Set offer insight into America's booming urban infrastructure in the early 1910s and 20s, and the important role toys played in preparing children for future careers in engineering and architecture. A stuffed toy monkey from Germany tells the story of young Jewish refugees to the United States during World War II. The board game Candyland has its origins in the dreaded polio epidemic of 1950s. Exploring Childhood and Play Through 50 Historic Treasures brings together a collection of beloved toys and games from the last two centuries to guide readers on a journey through the history of American childhood and play, 1840-2000. Through color photographs and short essays on each object, this book examines childhood against the backdrop of culture, politics, religion, technology, gender, parenting philosophies, and more. The book features ten categories of objects including board and electronic games, dolls, action figures, art toys, optical toys, animal toys, construction sets, and sports. Each essay tells the story of the individual object its historic context, and each passage builds upon one another to create a fascinating survey of how childhood and play changed over the course of two centuries.

The First Voyage Around the World, 1519-1522 Jan 15 2021 The First Voyage around the World is also a remarkably accurate ethnographic and geographical account of the circumnavigation, and one that has earned its reputation among modern historiographers and students of the early contacts between Europe and the East Indies.

*Exploring American History Nov 05 2022* Traces the history of the United States from the arrival of the first explorers to the present day.

*History of Indiana from Its Exploration to 1922 Jan 27 2022*

*Higher and Colder Sep 22 2021* During the long twentieth century, explorers went in unprecedented numbers to the hottest, coldest, and highest points on the globe. Taking us from the Himalaya to Antarctica and beyond, *Higher and Colder* presents the first history of extreme physiology, the study of the human body at its physical limits. Each chapter explores a seminal question in the history of science, while also showing how the apparently exotic locations and experiments contributed to broader political and social shifts in twentieth-century scientific thinking. Unlike most books on modern biomedicine, *Higher and Colder* focuses on fieldwork, expeditions, and exploration, and in doing so provides a welcome alternative to laboratory-dominated accounts of the history of modern life sciences. Though centered on male-dominated practices—science and exploration—it recovers the stories of women's contributions that were sometimes accidentally, and sometimes deliberately, erased. Engaging and provocative, this book is a history of the scientists and physiologists who face challenges that are physically demanding, frequently dangerous, and sometimes fatal, in the interest of advancing modern science and pushing the boundaries of human ability.
