Essentials of Correctional Nursing Sep 10 2020 "Essentials of Correctional Nursing is the first new and comprehensive text about this growing field to be published in the last decade. Fortunately, the editors have done a great job in all respects...This book should be required reading for all medical practitioners and administrators working in jails or prisons. It certainly belongs on the shelf of every nurse, physician, ancillary healthcare professional and corrections administrator."--Corhealth (The Newsletter of the American Correctional Health Services Association) "I highly recommend Essentials of Correctional Nursing, by Lorry Schoenly, PhD, RN, CCHP-RN and Catherine M. Knox, MN, RN, CCHP-RN, editors. This long-awaited book, dedicated to the professional specialty of correctional nursing, is not just a good read, it is one of those books that stays on your desk and may never make it to the bookshelf."--American Jails "Correctional nursing has minimal published texts to support, educate, and provide ongoing best practices in this specialty. Schoenly and Knox have successfully met those needs with Essentials of Correctional Nursing."--Journal of Correctional Health Care Nurses have been described as the backbone of correctional health care. Yet the complex challenges of caring

for this disenfranchised population are many. Ethical dilemmas around issues of patient privacy and self-determination abound, and the ability to adhere to the central tenet of nursing, the concept of caring, is often compromised. *Essentials of Correctional Nursing* supports correctional nurses by providing a comprehensive body of current, evidence-based knowledge about the best practices to deliver optimal nursing care to this population. It describes how nurses can apply their knowledge and skills to assess the full range of health conditions presented by incarcerated individuals and determine the urgency and priority of requisite care. The book describes the unique health needs and corresponding care for juveniles, women, and individuals at the end of life. Chapters are devoted to nursing care for patients with chronic disease, infectious disease, mental illness, or pain, or who are in withdrawal from drugs or alcohol. Chapters addressing health screening, medical emergencies, sick call, and dental care describe how nurses identify, respond to, and manage these health care concerns in the correctional setting. The *Essentials of Correctional Nursing* was written and reviewed by experienced correctional nurses with thousands of hours of experience. American Nurses Association standards are woven throughout the text, which provide the information needed by nurses studying for certification exams in correctional nursing. The text will also be of value to nurses working in such settings as emergency departments, specialty clinics, hospitals, psychiatric treatment units, community health clinics, substance abuse treatment programs, and long-term care settings, where they may encounter patients who are currently or have previously been incarcerated. **Key Features:** Addresses legal and ethical issues surrounding correctional nursing Covers common inmate-patient health care concerns and diseases Discusses the unique health needs of juveniles, women, and individuals at the end of life Describes how nurses can safely navigate the correctional environment to create a therapeutic alliance with patients Provides information about health screening, medical emergencies, sick call, and dental care Serves as a core resource in the preparation for correctional nursing certification exams

Clinical Care Classification (CCC) System Manual Jan 27 2022 Designated a Doody's Core Title! The Preeminent Nursing Terminology Classification System "The Clinical Care Classification (CCC) System described in this manual is the only standard coded nursing terminology that is based on sound research using the nursing process model framework and that meets the Patient Medical Record Information (PMRI) comparability requirement. The CCC System allows patient care data generated by nurses to be incorporated into the PMRI database, and enables nurses' contributions to patient outcomes to be studied and acknowledged." -- From the Foreword by Sheryl L. Taylor, BSN, RN, Senior Consultant, Farrell Associates TESTIMONIES: "ABC Coding Solutions-Alternative Link developed ABC codes for nursing in collaboration with Dr. Virginia Saba, developer of the CCC system. Approximately two hundred ABC codes were developed from the CCC System of Nursing Interventions to accurately document nursing and integrative health care processes, classify and track clinical care, and develop evidence-based practice models, thus filling significant gaps in older medical code sets." --Connie Koshewa, Practitioner Relations Director, ABC Coding Solutions-Alternative Link "The International Classification for Nursing Practice (ICNPÆ) is a program of the International Council of Nurses (ICN). One of the first steps in the development of the ICNPÆ was to collect and compare all the nursing concepts in existing nursing terminologies, including the CCC. To facilitate the goal of ICNPÆ as a unified nursing language system, a project is under way to map the CCC to the ICNPÆ Version 1.0. This work will facilitate evaluation and ongoing development of both terminologies and allow ICN to compare data using CCC codes with data from other standard nursing terminologies." --Amy Coenen, PhD, RN, FAAN, Director, ICNPÆ Program, International Council of Nurses

By creating specific systems to ensure license protection, we in turn provide more effective hand-off communication. Every nurse knows it's the law and that you don't want to lose your license, but do we really know why the methods of

Chart to Save Your RN License Mar 17 2021 You can be an excellent nurse in the clinical setting and still fail to prove that you are an excellent nurse if your documentation is inadequate. Having worked in a variety of inpatient and outpatient settings, I understand the obstacles nurses face. There's just not time, nor do nurses have the mental energy to meticulously document every little thing on top of the rest of their to-do list. That's part of why I became passionate about documentation education. It doesn't have to be an overwhelming, endless challenge to chart exhaustively in hopes that you enter enough data into the chart to defend yourself one day. Rather, leveraging the most critical data, knowing how to format notes and exactly what to say, and when to spend five minutes dumping information into the chart can be learned skills that make documentation faster, easier, and less stressful, while doing a better job of defending your actions. Perfecting my own documentation and working to find concrete guidelines to share with my fellow nurses has become my passion. As I gained more knowledge and researched the dusty, forgotten corners of the internet for obscure evidence-based practice and case studies, becoming a subject matter expert on nursing documentation lit a spark because sharing this information helps empower nurses to understand exactly what should appear in their patient charts, where, when it should be entered, and how it should be phrased.

The Future of Nursing Jul 09 2020 The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.
