Drive Sep 26 2019 The New York Times bestseller that gives readers a paradigm-shattering new way to think about motivation from the author of *When: The Scientific Secrets of Perfect Timing* Most people believe that the best way to motivate is with rewards like money—the carrot-and-stick approach. That's a mistake, says Daniel H. Pink (author of *To Sell Is Human: The Surprising Truth About Motivating Others*). In this provocative and persuasive new book, he asserts that the secret to high performance and satisfaction-at work, at school, and at home—is the deeply human need to direct our own lives, to learn and create new things, and to do better by ourselves and our world. Drawing on four decades of scientific research on human motivation, Pink exposes the mismatch between what science knows and what business does—and how that affects every aspect of life. He examines the three elements of true motivation—autonomy, mastery, and purpose—and offers smart and surprising techniques for putting these into action in a unique book that will change how we think and transform how we live.

Personal Finance for Dummies® Oct 20 2021 If your personal financial knowledge is limited, you're probably not at fault. *Personal Finance 101* isn't offered in our schools - not in high school and not even in the best colleges and graduate programs. It should be. (Of course, if it were, I wouldn't be able to write fun and useful books such as this - or maybe they'd use this book in the course!) People keep making the same common financial mistakes over and over - procrastinating and lack of planning, wasteful spending, falling prey to financial salespeople and pitches, failing to do sufficient research before making important financial decisions, and so on. This book can keep you from falling into the same traps and get you going on the best paths. As unfair as it may seem, numerous pitfalls await you when you seek help for your financial problems. The world is filled with biased and bad financial advice. As a practicing financial counselor and now as a writer, I constantly see and hear about the consequences of poor advice. Of course, every profession has bad apples, but too many of the people calling themselves "financial planners" have conflicts of interest and an inadequate competence level. All too often, financial advice ignores the big picture and focuses narrowly on investing. Because money is not an end in itself but a part of your whole life, this book helps connect your financial goals and challenges to the rest of your life. You need a broad understanding of personal finance to include all areas of your financial life: spending, taxes, saving and investing, insurance, and planning for major goals like education, buying a home, and retirement.....You want to know the best places to go for your circumstances, so this book contains specific, tried-and-proven recommendations. I also suggest where to turn next if you need more information and help.

The Global Findex Database 2017 Nov 28 2019 In 2011 the World Bank—with funding from the Bill and Melinda Gates Foundation—launched the *Global Findex* database, the world's most comprehensive data set on how adults save, borrow, make

payments, and manage risk. Drawing on survey data collected in collaboration with Gallup, Inc., the Global Findex database covers more than 140 economies around the world. The initial survey round was followed by a second one in 2014 and by a third in 2017. Compiled using nationally representative surveys of more than 150,000 adults age 15 and above in over 140 economies, The Global Findex Database 2017: Measuring Financial Inclusion and the Fintech Revolution includes updated indicators on access to and use of formal and informal financial services. It has additional data on the use of financial technology (or fintech), including the use of mobile phones and the Internet to conduct financial transactions. The data reveal opportunities to expand access to financial services among people who do not have an account—the unbanked—as well as to promote greater use of digital financial services among those who do have an account. The Global Findex database has become a mainstay of global efforts to promote financial inclusion. In addition to being widely cited by scholars and development practitioners, Global Findex data are used to track progress toward the World Bank goal of Universal Financial Access by 2020 and the United Nations Sustainable Development Goals. The database, the full text of the report, and the underlying country-level data for all figures—along with the questionnaire, the survey methodology, and other relevant materials—are available at www.worldbank.org/globalfindex.

The Financial Advisor M&A Guidebook Jun 23 2019 With M&As in the RIA space increasing, many firms are rapidly changing hands with little to no expert guidance on how to successfully execute a merger or acquisition. In 2017, a record number of M&A deals closed in the advisor space – 168 transactions, or a 22% growth over 2016. Aside from a fifth straight year of record highs in M&A activity, the size of the acquired firms has also increased, with average acquisitions involving wealth managers exceeding \$1.01 billion in assets under management. For many advisors, it only takes a handful of missteps during a merger or acquisition to jeopardize their business, but with so much unknown, advisors need a guidebook for success. A significant and often overlooked component to a successful RIA merger or acquisition is the thoughtful integration of technology. This comprehensive guide walks you through the steps of strategy, assessment, implementation, adoption and growth, all while considering how to best inspire and galvanize a firm's most valuable asset – its people. Combining the real-life experiences of a life-long financial advisor with the expertise of a 15-year operations director and founder of a large RIA ops network, this book takes real M&A experiences of the financial services industry and offers best practices, tools and resources to help advisors make smart decisions about technology integration that elevates the firm's goals and solidifies its future success.

Fiscal Management in Resource-Rich Countries Mar 13 2021 The extractive industries (EI) sector occupies an outsize space in the economies of many developing countries. Policy makers, economists, and public finance professionals working in such countries are frequently confronted with issues that require an in-depth understanding of the sector, its economics, governance, and policy challenges, as well as the implications of natural resource wealth for fiscal and public financial management. The objective of the two-volume *Essentials for Economists, Public Finance Professionals, and Policy Makers*, published in the World Bank Studies series, is to provide a concise overview of the EI-related topics these professionals are likely to encounter. This second volume, *Fiscal Management in Resource-Rich Countries*, addresses critical fiscal challenges typically associated with large revenue flows from the EI sector. The volume discusses fiscal policy across four related dimensions: short-run stabilization, the management of fiscal risks and vulnerabilities, the promotion of long-term sustainability, and the importance of good public financial management and public investment management systems. The volume subsequently examines several institutional mechanisms used to aid fiscal management, including medium-term expenditure frameworks, resource funds, fiscal rules, and fiscal councils. The volume also discusses the earmarking of revenue, resource revenue projections as applied to the government budget, and fiscal transparency, and outlines several fiscal indicators used to assess the fiscal stance of resource-rich countries. The authors hope that economists, public finance professionals, and policy makers working in resource-rich countries—including decision makers in ministries of finance, international organizations, and other relevant entities—will find the volume useful to their understanding and analysis of fiscal management in resource-rich countries.

International Experience in Developing the Financial Resources of Universities Aug 25 2019 This open access book aims to present the experiences and visions of several world university leaders, providing strategies and methods used to find various income sources for their institutions. The expansion of a university system requires a corresponding increase in funding. Consequently, university administrators all over the world are in a constant search for additional funds. If higher-level institutions are expected to deliver high-quality education and research, their sustainable funding is crucial to the development of the countries they serve. While governmental sources are a major part of the funding of most universities, economic downturns as in the case of the COVID-19 crisis may reduce governmental contributions in this and cause administrators to look for various alternative sources to help them compete in a global setting. This book offers valuable information and guidance to university leaders and administrators worldwide especially at a time when university budgets are under stress due to the COVID-19 pandemic with its dire financial and economic consequences.

Resources, Financial Risk and the Dynamics of Growth Aug 30 2022 This book presents a new System Dynamics model (the ERRE model), a novel stock and flow consistent global impact assessment model designed by the authors to address the financial risks emerging from the interaction between economic growth and environmental limits under the presence of shocks. Building on the World3-03 Limits to Growth model, the ERRE links the financial system with the energy, agriculture and climate systems through the real economy, by means of feedback loops, time lags and non-linear rationally bounded decision making. Prices and their interaction with growth, inflation and interest rates are assumed to be the main driver of economic failure while reaching planetary limits. The model allows for the stress-testing of fat tail extreme risk scenarios, such as climate shocks, energy transition, monetary policies and carbon taxes. Risks are addressed via scenario analyses, compared to real available data, and assessed in terms of the economic theory that lies behind. The book outlines the case for a government led system change within this decade, where the market alone cannot lead to sustainable prosperity. This book will be of great interest to scholars of climate change, behavioural, ecological and evolutionary economics, green finance, and sustainable development.

Adventure Finance Jan 29 2020 The venture capital model doesn't work—at least not for 99% of startups and small businesses. In this 99% are a lot of companies with incredible potential: businesses headed by female founders and those from diverse racial backgrounds, organizations headquartered outside of venture capital hubs, and purpose-driven enterprises that are creating social and environmental impact alongside financial success. Counter to what the press-savvy venture capital world would have you believe, there are a lot of funding options out there for startups and small businesses. *Adventure Finance* is designed to help you understand some of these options, and walk you through real examples of how other founders and funders have put them to use. In simple, approachable language, the book breaks down the different types of funding options available from revenue-based financing to recoverable grants to redeemable equity to distributed ownership and more. Through a mix of storytelling and frameworks, based on a decade of research and experience in investing in early-stage companies, this book will give you the ability to determine how each of these structures can contribute to your own funding journey. The goal for this book is to shift the conversation about startup funding and help founders and funders widen the spectrum of “mainstream” investment options in order to make the venture financing world more inclusive and purpose-driven.

The financial decision-making system is an extremely complicated one; it handles large sums of money but very often teachers feel that little of it filters through to their end of the system. This book explains, analyses and criticises the complexities of the financial decision-making systems in education. It discusses the role of the different bodies and people involved and explores the thinking and conventions which shape their findings. It considers how the effects of financial decisions made in the system are reflected in the curriculum and in the classroom, and puts forward possible

alternative methods of finance such as vouchers, loans and privatisation.

The text emphasizes economics as a way of thinking in which we compare added costs and benefits of actions in order to maximize net benefits. With the basics of capital theory, readers learn how to evaluate forestry investments in a way that embraces important environmental factors. Another key feature is a focus on analyzing current conflicts and tradeoffs that will continue to be prominent forestry issues in the 21st century: free market policies versus different levels of government intervention, economic development versus environmental conservation, private property rights versus public amenity rights, and timber versus non-timber outputs. This text also addresses additional topics not often found in other forest economic books including: economics of non-clearcutting management systems, economics of forest damage, risk analysis, inflation, environmental economics, capital budgeting, and regional economics. Add to this a micro-economics review, multiple-use and non-market good analysis, optimal capital management, benefit/cost analysis, timber supply and demand issues, appraisal and valuation, forest industry economics, and world forestry issues, and you have the most comprehensive forest economics text on the market. In addition to new and updated figures throughout the text, this newly-revised second edition provides an overview of important trends in the modern timber industry including advancements in engineered wood, international trade, global environmental issues, as well as community forestry and agroforestry.
