Modern Shotgunning Oct 12 2020 Every year millions of sportsmen and women take to America's fields and forests equipped with some type of shotgun. Millions of others participate annually in shotgun sports such as skeet, trap and sporting clays. In Modern Shotgunning, Dave Henderson gives readers a nuts-and-bolts look at modern shotguns. He explains chokes, stocks, barrels, and optics, as well as cleaning and safety practices. He also discusses how to choose the appropriate shotgun, shotgun games, gun fit, hand loading, and building your own specialty guns. Henderson doesn't write above his readers either, offering plainly written advice based on years of experience in the field and at the range. He writes without boast that in a year he probably shoots more rounds than do most hunters in a lifetime. Neither is Henderson leaning toward the heavy-wallet crowd,

for he knows the average hunter may not care for or cannot afford two-thousand-dollar shotguns, souped-up slug guns or optics. He offers tips for the budget-conscious, such as creating a cleaning rod from a soft pine dowel with a bicycle handlebar grip on one end and using Bounty paper towels rolled to bore diameter as a cleaning patch. Modern Shotgunning is ideal for beginners but not to be overlooked by veterans.

Towards a New Evolutionary Computation Jul 29 2019 Estimation of Distribution Algorithms (EDAs) are a set of algorithms in the Evolutionary Computation (EC) field characterized by the use of explicit probability distributions in optimization. Contrarily to other EC techniques such as the broadly known Genetic Algorithms (GAs) in EDAs, the crossover and mutation operators are substituted by the sampling of a distribution previously learnt from the selected individuals. EDAs have experienced a high development that has transformed them into an established discipline within the EC field. This book attracts the interest of new researchers in the EC field as well as in other optimization disciplines, and that it becomes a reference for all of us working on this topic. The twelve chapters of this book can be divided into those that endeavor to set a sound theoretical basis for EDAs, those that broaden the methodology of EDAs and finally those that have an applied objective.

Sustainable eco-technologies for water and wastewater treatment Jul 09 2020 One of the major challenges in the world is to provide clean water and sanitation for all. With 3% fresh water reserves in the earth, there are more than 1 billion people who still lack access to clean drinking water. The declining water quality has not only reduced the life expectancy of humans, but it has also contributed to the deleterious negative impacts on aquatic/marine life, flora, fauna and the ecosystem. However, with rapid technological advancements and the availability of advanced scientific instruments, there has been substantial improvement in the design and operation of water and wastewater treatment systems. Recently, these sustainable eco-technologies have been designed and operated to offer the following advantages: (i) a smaller footprint, (ii) less maintenance, (iii)

>99% removal of contaminants, (iv) provides the option for resource recovery, (v) less energy consumption, (vi) minimal use of chemicals, and (vii) less investment and operational costs. This book highlights the technologies used for the removal of pollutants such as dyes, uranium, cyanotoxins, faecal contamination and P/N compounds from water environments, and shows that ecotechnologies are becoming more and more important and playing critical role in removing a wide variety of organic and inorganic pollutants from water. In Focus - a book series that showcases the latest accomplishments in water research. Each book focuses on a specialist area with papers from top experts in the field. It aims to be a vehicle for in-depth understanding and inspire further conversations in the sector.

To Become a God Jul 21 2021 Evidence from Shang oracle bones to memorials submitted to Western Han emperors attests to a long-lasting debate in early China over the proper relationship between humans and gods. One pole of the debate saw the human and divine realms as separate and agonistic and encouraged divination to determine the will of the gods and sacrifices to appease and influence them. The opposite pole saw the two realms as related and claimed that humans could achieve divinity and thus control the cosmos. This wide-ranging book reconstructs this debate and places within their contemporary contexts the rival claims concerning the nature of the cosmos and the spirits, the proper demarcation between the human and the divine realms, and the types of power that humans and spirits can exercise. It is often claimed that the worldview of early China was unproblematically monistic and that hence China had avoided the tensions between gods and humans found in the West. By treating the issues of cosmology, sacrifice, and self-divinization in a historical and comparative framework that attends to the contemporary significance of specific arguments, Michael J. Puett shows that the basic cosmological assumptions of ancient China were the subject of far more debate than is generally thought.
